

Professional Shop Drawings

Specializing in Architectural Millwork and AWI quality certified projects; we produce high quality, accurate shop drawings for submittal packages and production. With a Master's Degree in Mechanical Engineering, 17 years of AutoCAD experience and 12 years as the owner of an AWI quality certified millwork shop, I can provide the design and drafting services that will impress your clients and improve your bottom line.

Improve your Image

With professional, high quality CAD shop drawings, your customers, their architects, and the project owners will be impressed. Submittals are the first product your customer receives and first impressions are extremely important. Professional drawings will give your clients confidence in your company and start the project off on the right foot. Your reputation is priceless, don't settle for less!

Do it your way

Shop drawings are done to YOUR specifications and customized to optimize your manufacturing processes and equipment. We set up your account by starting with a thorough interview and then produce drawings that are designed for your company. We also ensure all your information is kept strictly confidential. Does your company use Microvellum? We can do your shop drawings with Microvellum...ready to send to your CNC!

Save time

To further impress your clients, get your submittals done fast. This is all we do and we have the resources to get it done quickly and get it done right! Good drawings mean less time getting approvals and doing revisions. Project managers and the shop floor will waste less time asking questions. Let your engineering people utilize their time by outputting jobs to the shop (Ordering materials, CNC programming, etc.) By using our accurate, complete drawings, their job will be much easier and faster. With shorter submittal times, fewer revisions, increased output from in-house engineering, the result is shorter job turnaround times which is what your customers want.

Increase your profits!

Successful projects start with good plans. With professional, accurate drawings, significant time is saved in project management and production. Reduce the time that employees have to stop producing and go ask questions. With all the information on the drawings, production time is optimized. Good drawings also reduce errors and rework. The bottom line is...good drawings = more profit.
